Climbing Data Analysis

Hayden Crofts, Riley Wilkinson

Stat 386

November 14, 2023

Outline

Introduction

- Briefly introduce the problem statement.
- Explain the importance of the problem in the context of data science.
- State your research questions and objectives.

Data Collection

- Describe the data sources and types of data used in your project.
- Discuss any data preprocessing and cleaning steps.
- Highlight any challenges faced during data collection and cleaning.

Exploratory Data Analysis

- Present summary statistics and visualizations of the data.
- Highlight any interesting patterns or insights discovered.
- Discuss any data transformations or feature engineering.

Methodology

- Explain the machine learning or statistical methods used.
- Describe the model(s) and algorithms applied.
- Discuss any cross-validation or hyperparameter tuning.

Example Slide with Multiple Columns

Column 1

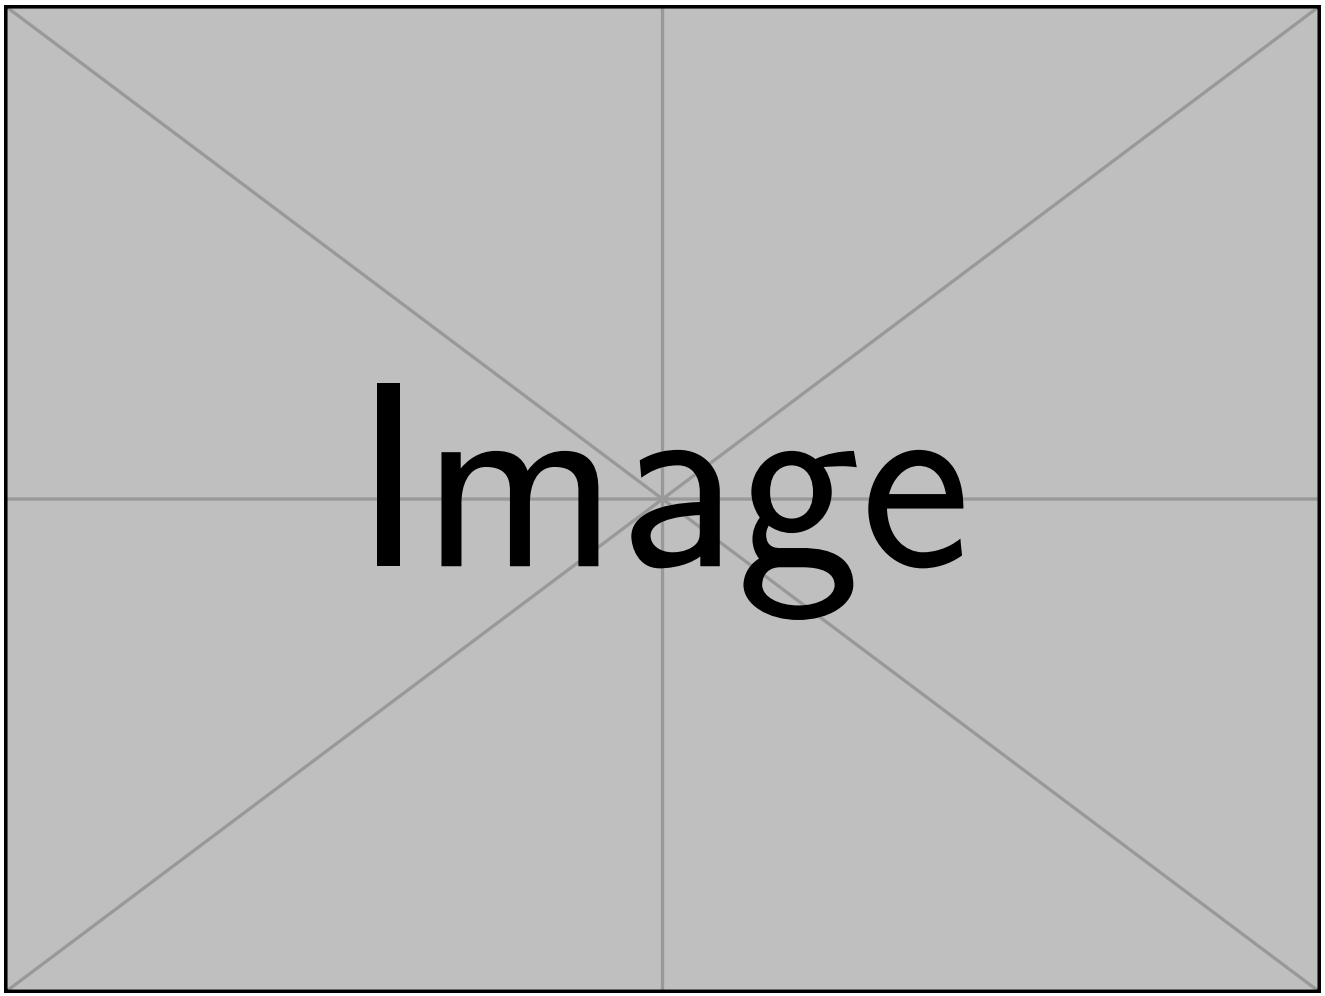
- Item 1
- Item 2
- Item 3

Column 2

- Item A
- Item B
- Item C

Example Slide with a Figure

- Example Text Here
- More Text Here



Results

- Present the results of your analysis.
- Use tables, charts, and visualizations to convey key findings.
- Discuss the performance metrics and any insights gained.

Conclusion

- Summarize the main findings and their implications.
- Reflect on the success of your project and any limitations.
- Suggest areas for future research or improvements.

Questions & Answers

- Invite questions from the audience.
- Be prepared to answer questions about your project.

Thank You

Thank you for your attention!
